Da sempre riteniamo che la crescita aziendale passi anche attraverso una particolare attenzione all'ottica green, ragione per cui nei nostri stabilimenti i materiali di consumo sono tutti riciclabili ed è stato installato un impianto fotovoltaico da 500KW con previsione di un futuro ampliamento dello stesso.

SOTTOSQUADRO

s o t t o s q u a d r o

La collezione NUR rappresenta l'apice dell'ingegneria e del design sanitario made in Italy. I bordi dei lavabi NUR richiedono una rivisitazione del classico processo di colaggio per accogliere la curva "SOTTOSQUADRO".

I nostri artigiani devono intervenire e rimuovere gradualmente gli stampi in gesso a mano per consentire un processo di essiccazione in più fasi. L'inclinazione negativa del bordo è unica nel suo genere e rappresenta la rinnovata attitudine ambiziosa di Alice insieme al designer Massimiliano Braconi.

The NUR collection represents the pinnacle of engineering and sanitary design made in Italy. The edges of the NUR washbasins require a reinterpretation of the classic casting process to accommodate the "SOTTOSQUADRO" curve. Our craftsmen have to step in and gradually remove the plaster molds by hand to allow for a multi-stage drying process. The negative inclination of the edge is unique in its kind and represents the renewed ambitious attitude of Alice together with the designer Massimiliano Braconi.

Alice partecipa al progetto ASEM “Advanced System for Environment Management”. Lo scopo del progetto è quello di integrare le risorse termiche derivanti dai forni presenti in azienda con il processo direzionandole ove servono, per utilizzarle nella loro totalità. Si prevede di gestire così: il riscaldamento ambientale normale, l’essiccazione degli stampi, l’essiccazione dei pezzi, il riscaldamento dei servizi e la termostatazione degli impasti a partire dal recupero del calore presente nell’aria di raffreddamento del forno tunnel. Tale recupero verrà integrato da generatori esterni che verranno in supporto nei momenti di massima richiesta.

Alice takes part to the ASEM Project - “Advanced System for Environment Management”. The purpose of the project is to re-route the thermal resources derived from the furnaces used at the factory to support the production process, directing them where they are needed and using them fully. The heat is planned to be used as follows: normal environmental heating, drying of the molds, drying of the pieces, heating of services and thermostating of the dough starting from the recovery of the heat present in the cooling air of the tunnel oven. This recovery will be integrated by external generators that will come in support at times of maximum demand.
